

1  
2       **52.** A content provider as recited in claim 51, wherein:

3           the network port comprises a connector compatible with a wire-based  
4           communications network; and

5           the transmitter comprises a transmitter capable of transmitting signals over  
6           a wireless medium.

7  
8       **53.** A content provider as recited in claim 51, wherein the server is  
9           further configured to serve the content to the local service provider in response to  
10           requests from the multiple clients.

11  
12       **54.** A content provider as recited in claim 51, wherein the server is  
13           further configured to serve the content to at least one other local service provider  
14           which provides the content to multiple clients.

15  
16       **55.** A content provider as recited in claim 51, wherein:  
17           the server is further configured to serve the content to at least one other  
18           local service provider which provides the content to multiple clients; and  
19           the transmitter is further configured to transmit the content over the second  
20           network to the at least one other local service provider.
